

Sample Syllabus: Introduction to Artificial Intelligence

Course Information

Subject: Introduction to AI (CS101)

Instructor: Dr. Alan Turing

Prerequisites: Basic Python Programming

Topics Covered

1. History of AI: Turing tests, symbolic AI, early neural networks.
2. Machine Learning Basics: Supervised learning, Unsupervised learning, and Reinforcement learning.
3. Neural Networks: Perceptrons, activation functions, backpropagation, and loss functions.
4. Advanced AI topics: Natural Language Processing (NLP), Generative AI, Large Language Models (LLMs), Embeddings, FAISS, and LangChain architectures.
